

# ASSEMBLY INSTRUCTIONS:

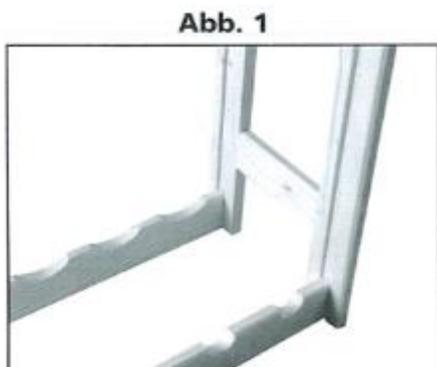

## PACKAGE CONTENTS:

1. 2 pcs. side panels
2. 9 pcs. cross connections with a small recess
3. 9 pcs. cross connections with a large recess
4. 1 pc. measure stick (packed together with the screws)
5. 36 pcs. wooden screws

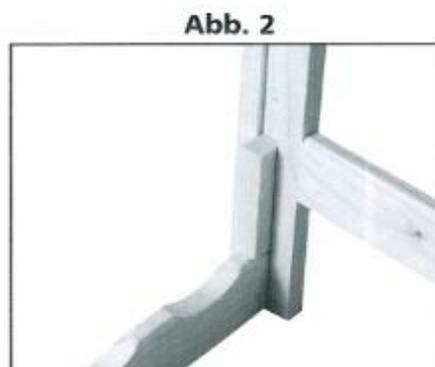

1. The bottle rack is best assembled from bottom to top (see pic. 1). Screw a cross connector (2, 3) at the front and back to a side part (1). Please make sure that the cross connectors snap into the groove provided, which is located on the inside of the side parts (see pic. 1). The side parts are symmetrically provided with screw holes. Therefore there is no predetermined top or bottom.

2. For the next layer of the cross connector, simply place the spacer measuring stick (4) on the previously screwed position (see pic. 2). Place the cross connector flush, screw it on and the distance fits! Repeat this process until the shelf is completely assembled. Please note that the cross connections with the large and small recesses are only screwed on one side and that the recesses point upwards.
